

PDS Backup Solution

Preferred Data Systems can install and manage a data backup solution for your company. This service includes:

- Two Network Attached Storage (NAS) devices
- A local backup for your office every day
- Replication of your local backup to any remote location*
- Free 24/7 help desk monitoring and support
- Unlimited storage**

How many weeks can PDS save your data?

Total NAS storage size

Total disk usage + (The number of days backed-up in a week • Amount of new data in one day)

EXAMPLE

Assuming these conditions:

- Your server is using 367 GB
- You accumulate an average of 8 GB of new data per day
- Your NAS size is 1,500 GB
- You want a backup every day

Your calculation of available backup in weeks:

$$\frac{1,500\text{GB}}{367\text{GB} + (1\text{week} \cdot 8\text{GB})} = 4 \text{ weeks}$$

* Estimated using typical upload speed of cable or T1 connection

**Based on the number/size of the NAS devices
