BANSHEE NETWORKS—LB251

BANSHEE Networks, LLC has released the "Little BANSHEE", facilitating Wireless WAN (Wide Area Network) connectivity via Wireless LAN (Local Area Network), or 10/100 Ethernet LAN ports. The product brings yet another alternative for primary or back-up internet connectivity. The small device (6"Wx10.5"Lx1.5"D) easily fits into any infrastructure allowing for a reliable, cost effective alternative to high-speed backup connectivity, with broadband WWAN availability.

Dimensions:

6" Inch Wide x 10.5" Length x 1.5" Depth

Usage Compatibility:

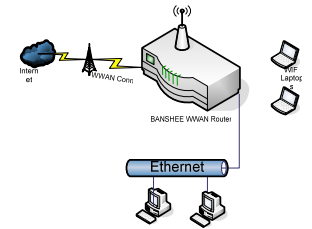

- Virtually any platform capable of WAN connectivity via IP. This means if your device is capable of internet connectivity, the Little BANSHEE is capable of providing that connectivity.

Supported WWAN:

- Most platforms available on PC-Card (PCMCIA), including 3G, ex: 1xrtt/EVDO, GSM/EDGE, HSDPA, and more...

Features/Benefits:

- Included Firewall/VPN capabilities allowing IPSEC site to site tunneling when activated.
- Standard N-Type Antenna connectors allow for stationing in rooms with poor signal.
- Allows for two WWAN connections enabling options for shared bandwidth and fault tolerance.
- Maximum compatibility across both user platforms and carrier options.
- Scalable upto 40 users, depending on connection and services selected.

***WWAN Card and Service Not Included

LB-251 USAGE HIGHLIGHTS

- **Great alternative to expensive BRI back-up solutions.**
- **Portable solution great for transportation based business.**
- **Compatible with nearly all types of PC Card based WWAN cards.**
